Thank you very much..

Sorry I'm a newbie, the questions are maybe strange for you..

Did I understand you correctly, should I give this here

Quote:kernel /boot/vmlinuz-2.6.18-12-fza-686-bigmem

as command, or do you mean that I should edit my Menu.lst with this parameters:

Quote:kernel /boot/vmlinuz-2.6.18-12-fza-686-bigmem

root=UUID=19eab690-e5bf-4663-81b2-b74d7fcab58f ro quiet splash

Could you recommend to use the startupmanager ?

Thank you very very much again...

greetings,

---
