Hi,

Quote:

I tried what you have mentioned before, but the openvz kernel that I have installed will not be loaded.

What does it mean?

You have rebooted the system, chosen OpenVZ kernel and what's happened after that?

Quote:

```
/boot/vmlinuz-2.6.18-12-fza-686-bigmem root=UUID=19eab690-e5bf-4663-81b2-b74d7fcab58f ro  
single
```

why do you want to boot in single-mode?

P.S. try

```
/boot/vmlinuz-2.6.18-12-fza-686-bigmem root=UUID=19eab690-e5bf-4663-81b2-b74d7fcab58f ro  
quiet splash
```
