On my CentOS 5.2 host nodes I do not see that ipv6 forwarding is enabled by default.

According to this page:

<http://pages.citebite.com/y6x6c2h3misp>

Linux does not allow you to turn on ipv6 forwarding for a single interface. It must be enabled or disabled globally.

Can you check ``cat /proc/sys/net/ipv6/conf/all/forwarding`` on your host node and report back?
