Subject: Init problem on vps node.
Posted by pug123 on Fri, 18 Jul 2008 14:04:39 GMT

Hello!

I have several servers with openvz (adminstrated through HyperVM) and sometimes on few of them I can see two init processes where one of them consumes 100% of cpu. What is the possible reason for that?

When I killl this process it does help but probably after some time problem occurs again. Below I show how it looked from top command:

```
 PID USER     PR  NI  VIRT  RES  SHR S %CPU %MEM   TIME+  COMMAND
8816 root     25   0  1756  680  592 R  100  0.0  1529:49 init
```

Thank you for any help.
