Subject: netdev_add under debian : how to configure device after
Posted by h.henoch on Tue, 22 Jul 2008 08:05:27 GMT

I've moved a netwotk adpater to a vps like the user's guide explain it.

But I don't know how to configure this device on the vps now ...

I've a debian etch and the explanation in the user's guide seems to be for a redhat.

Thanks
