---

Dear download.openvz.org Maintainer,

For this Debian package

<http://download.openvz.org/debian/dists/etch/main/binary-amd>

64/base/linux-image-2.6.24-openvz-24-004.1d1-amd64\_004.1d1\_a md64.deb

would it be possible to publish the source?

Only Kernel of 2.6.18 and higher support the 34 Infiniband cards

(mlx4\_core) that I have and

I need it to compile a module that is not included in the above DEB

package (igb2xxx).

The expected location to find the sources is

<http://download.openvz.org/debian/dists/etch/main/source/>, but there

is nothing there.

Alex
