Hi,

1. Quote: sometimes on few of them I can see two init processes

I didn't catch you. Did you see two init process inside VE or inside HN?

- 2. Quote: where one of them consumes 100% of cpu Did it consume this value for a long time?
- 3. If you come across this issue another time, please show "cat /proc/PID/status" "cat /proc/PID/wchan" where PID is the pid of that process?
- 4. What OS templates do you use? Is there a particular template that you use for all problem VEs?

Thank You!
