Hello,

We are in the process migrating vpses from Vituozzo node to OpenVZ node. We tried many methods but none of the worked.

If anybody could send a good procedure to do this migration that would be very helpful.

Thanks in advance for the help.

Regards,
BobHi,

Please someone help me

I am facing below problem

Installed OpenVz in one of our server.

1. Downloaded rpm for kernel, vzpkg, vzquota etc all are working fine.
But when installing

```
rpm -ivh vztmpl-fedora-core-4-2.0-2.i386.rpm
```

Says it is already installed

But when we are giving rpm -ql or rpm -qa it shows it is not installed.

2. Giving vzpkgcache command
