Subject: VE start failed *SOLVED*
Posted by locutius on Tue, 22 Jul 2008 14:45:07 GMT

Hello,

 We are in the process migrating vpses from Vituozzo node to OpenVZ node. We tried many methods but none of the worked.

 If anybody could send a good procedure to do this migration that would be very helpful.

 Thanks in advance for the help.

Regards,
BobHi,

 Please someone help me

 I am facing below problem

 Installed OpenVz in one of our server.

 1. Downloaded rpm for kernel, vzpkg, vzquota etc all are working fine.
But when installing

 rpm -ivh vztmpl-fedora-core-4-2.0-2.i386.rpm

 Says it is already installed

 But when we are giving rpm -ql or rpm -qa it shows it is not installed.

2. Giving vzpkgcache command
