Well I can see that you have a big problem with privvmpages and a small one with tcpsndbuf, you need to increase this values in your VE 101, please use vzcfgvalidate /PATH/VE.conf to check the config, don't think in this way "I have 10gb of ram and this VE is going to have 2gb of ram ...", you can't set a specific amount of RAM for a VE because the RAM for a computer is not a piece of something.
