Hello,

I have following error when i try to start some of our vps:

The vps konkoor87.vm is locked by another user. This would also be because you had interrupted an earlier activity that would take long time to complete. HyperVM has waited 15 seconds for the other process to finish. Please try after sometime.

I cant start vps with following too:

```
vzctl --skiplock start 380
```

and see following:

```
Starting VE ...
```

```
vzquota : (error) can't lock quota file, some quota operations are performing for id 380
```

```
vzquota on failed [7]
```

I see following in /vz/lock too:

```
310.lck 320.lck 330.lck 370.lck 380.lck
```

How can resolve this issue?

Thanks
