Hi,

to answer your question you need to specify what do exactly you want to do.

If you want to remove otemplate cache please have a look inside /vz/template/cache/ directory.  
You can easily remove otemplate cache from that directory.

If you want to remove otemplate metadata. At first, make sure that you have something installed:

```
rpm -qa | grep vztmpl
```

Then you can remove appropriate package with "rpm -e" command.
