Subject: Problem with VZYuming.
Posted by David C on Tue, 05 Aug 2008 09:09:17 GMT

Hi all, like the other guy in the other thread, I'm having some problems installing yum on one of my VE via vzyum.

Any ideas? My VE is running on Centos 4 Default OSTemplate.

I'm able to yum just fine on the host machine though.

```
[root@radiowave rpm]# vzyum 401 install yum
exec /usr/bin/yum -c /vz/template/centos/4/i386/config/yum.conf --installroot /v
                                z/root/401 install yum
There was a problem importing one of the Python modules
required to run yum. The error leading to this problem was:

   /usr/share/vzpkgtools/vzrpm43/lib/python2.4/site-packages/rpmmodule.so: wrong
                                ELF class: ELFCLASS32

Please install a package which provides this module, or
verify that the module is installed correctly.

It's possible that the above module doesn't match the
current version of Python, which is:
2.4.3 (#1, May 24 2008, 13:57:05)
[GCC 4.1.2 20070626 (Red Hat 4.1.2-14)]

If you cannot solve this problem yourself, please go to
the yum faq at:
  http://wiki.linux.duke.edu/YumFaq
```
