Hi,

Here a list of some control panel for openVZ: http://wiki.openvz.org/Control_panels

As you can see the VZadmin homepage (http://www.ronny-goerner.de/)is down. This package could be deprecated.

I am using now HyperVM (not is totally free) but i am happy, and is look-like. I install it in master-server and their works with openVZ is really amazing

Regards, Victor A.
