Hi,

Here a list of some control panel for openVZ:

http://wiki.openvz.org/Control_panels

As you can see the VZadmin homepage (<http://www.ronny-goerner.de/>) is down. This package could be deprecated.

I am using now HyperVM (not is totally free) but i am happy, and is look-like. I install it in master-server and their works with openVZ is really amazing

Regards,
Victor A.
