
Subject: [PATCH 5/9] namespaces: utsname: use init_utsname when appropriate
Posted by [serue](#) on Thu, 18 May 2006 15:49:56 GMT

[View Forum Message](#) <> [Reply to Message](#)

In some places, particularly drivers and __init code, the init utsns is the appropriate one to use. This patch replaces those with a the init_utsname helper.

Changes: Removed several uses of init_utsname(). Hope I picked all the right ones in net/ipv4/ipconfig.c. These are now changed to utsname() (the per-process namespace utsname) in the previous patch (2/7)

Signed-off-by: Serge E. Hallyn <serue@us.ibm.com>
