It's as easy as 1-2-3.

1. Open a new tab in your browser, type wiki.openvz.org into the "Location" field. Press Enter. Browser will open OpenVZ wiki's Main Page.

2. Look at the left column. You will notice the box called "search", with an input line and two buttons in it. Type in "traffic shaping" and click on either button.

3. A page with search result will appear. Click on the first result, this will be Traffic shaping with tc. Read the page carefully and follow the instructions.
