It's as easy as 1-2-3.

- 1. Open a new tab in your browser, type wiki.openvz.org into the "Location" field. Press Enter. Browser will open OpenVZ wiki's Main Page.
- 2. Look at the left column. You will notice the box called "search", with an input line and two buttons in it. Type in "traffic shaping" and click on either button.
- 3. A page with search result will appear. Click on the first result, this will be Traffic shaping with tc. Read the page carefully and follow the instructions.
