Subject: openvz patched vanilla kernel vs redhat kernel Posted by piavlo on Mon, 18 Aug 2008 20:29:42 GMT

Hi,

This is question to the developers: I'm wondering if there are any pros and cons in running vanilla kernel with openvz patch vs redhat kernel with openvz patch?

Currently i have some gentoo boxes with kernel RHEL5 028stab057.2 which with minimal test seems to be working fine.

Other gentoo boxes are running kernel 2.6.18 028stab053.14

So i'm wondering if it is worth switching to RHEL5 kernel?

Thanks Alex
