Hi,

yes, my bad. I've never heard about vldump

But as far as I understand you should do the following:

- we suppose that vldump-162.xdelta was created as a delta between vldump-162.tar and newer CT 162 state.

-

```
# cd /vz/dump
```

```
# xdelta patch vldump-162.xdelta vldump-162.tar vldump-163.tar
```

```
# vldump --restore /vz/dump/vldump-163.tar 163
```
