piavlo wrote on Sun, 24 August 2008 21:00: I think that you should change \$CTID to \$VEID in all your custom scripts. Probably the naming scheme has changed with vzctl versions newer than 3.0.22 from VE to CT.

This is what i've setup

```
#!/bin/bash
```

```
CONFIGFILE=/etc/vz/conf/$VEID.conf
```

```
. $CONFIGFILE
```

```
VZHOSTIF=`echo $NETIF |sed 's/^.*host_ifname=(.*)$/$1/g`
```

```
if [ ! -n "$VZHOSTIF" ]; then
```

```
    echo "According to $CONFIGFILE VE$VEID has no veth interface configured."
```

```
    exit 1
```

```
fi
```

```
if [ ! -n "$BRIDGEDEV" ]; then
```

```
    echo "According to $CONFIGFILE VE$VEID veth interface is not enslaved to any bridge."
```

```
    exit 1
```

```
fi
```

```
ifconfig veth${VEID}.0 0
```

```
brctl addif ${BRIDGEDEV} veth${VEID}.0
```

```
exit $?
```

Hi piavlo,

```
# vzctl --version
```

```
vzctl version 3.0.22
```

Old version

Tried your script also w/o solution.

```
[Host]# vzctl start 101
```

```
Starting VE ...
```

```
VE is mounted
```

```
Setting CPU units: 1000
```

```
Configure meminfo: 65536
```

```
Set hostname: satimis-desktop32
```

```
File resolv.conf was modified
```

```
Configure veth devices: veth101.0
```

/usr/sbin/vznetcfg: 20: source: not found
VE start in progress...

Still the same mistake "/usr/sbin/vznetcfg: 20: source: not found"
