I set this options

```
[shaggycat@hn ~]$ cat /etc/sysconfig/network | grep NETWORKING
NETWORKING=yes
NETWORKING_IPV6=no
[shaggycat@hn ~]$
```

But, why some servises on HN bind from ipv6:

```
[shaggycat@hn ~]$ netstat -nl | grep LISTEN | grep -v unix
tcp        0      0 127.0.0.1:25            0.0.0.0:*               LISTEN
tcp        0      0 0.0.0.0:4000            0.0.0.0:*               LISTEN
tcp        0      0 10.0.10.3:4001

.....

0.0.0.0:*                   LISTEN
tcp        0      0 0.0.0.0:4662            0.0.0.0:*               LISTEN
tcp        0      0 :::22                   :::*                    LISTEN
tcp        0      0 :::80                   :::*                    LISTEN
tcp        0      0 :::959                   :::*                    LISTEN
[shaggycat@hn ~]$
```

What's wrong?

Thanks.
