Hi,

on <http://www.slackware.com/announce/12.1.php> shows:

[...]

Here are some of the advanced features of Slackware 12.1:

- Runs the 2.6.24.5 version of the Linux kernel from <ftp.kernel.org>. Also included is a kernel patched with Speakup to support speech synthesizers providing access to Linux for the visually impaired community. The 2.6.x kernel series has matured into a stable kernel, and provides reliable performance for your desktop or your production server.

[...]

So you can try the 2.6.24er (devel) OpenVZ patch and built a own OpenVZ Kernel (-> <http://wiki.openvz.org/Download/kernel/2.6.24/2.6.24-ovz005.1>)
