I saw in this guide (<http://www.linux.com/feature/114214>) a "possible" way of setting RAM per VE and so I tried this:

```
$ vzctl set VEID --vmguarpages $((256 * 512)) --save
```

```
$ vzctl set VEID --privvmpages $((256 * 512)) --save
```

and I checked the configuration like this ...

```
$ vzcfgvalidate /etc/vz/conf/VEID.conf
```

and it replies like this ...

Error: limit should be = 9223372036854775807 for vmguarpages (currently, 131072)

This doesn't make any sense... can someone plz shed some light on this?
