Hmm...

Your default gateway (81.x.y.1) need to know how to get to 85.a.b.c. It should have a direct route via VE0 or HWN should answer to arp requests for 85.a.b.c

Could you pls check that

- arp requests for 85.a.b.c are seen on eth0
- arp replies sent back

Basically, arp replies should be sent if
ip r g 85.a.b.c from 81.x.y.1 iif eth0
returns route to venet.

Regards,
Den
