Hello, thanks for your response. Yes I did apply the correct nameservers for my network.  
resolv.conf for both the HN and VE read:

```
nameserver 67.30.129.1
```

```
nameserver 128.121.254.73
```

The HN and VE resolve the correct IP from names fine, the VE just gets "Destination Host Unreachable" when attempting to send traffic using names.
