Hi Ralph,

if not set; please update your nameserver configuration:

via console:

```
$ vzctl set 177 --nameserver 213.133.100.100 --nameserver 213.133.98.98 --nameserver  
213.133.99.99 --save
```

(used the hetzners colocation dns server)

or use the webvz config tool to setup.

Btw, have your containers a connection to the net, can you ping some ip, above ?

Regards,
Thorsten
