Hello,

a few questions just to clarify the situation:

1.

Quote:

ping google.com

PING google.com (64.233.167.99) 56(84) bytes of data.

From 67-30-129-74.4servers.com (67.30.129.74) icmp_seq=7 Destination Host Unreachable

Are you able to "ping 64.233.167.99" from inside the VE?

2.

Quote:

tcpdump -i venet0:0 -e -n host google.com

-bash: tcpdump: command not found

You'd better install tcpdump inside VE.

3.

Please, also "ip route list table all", "arp -n" from the HN
