Hey guys,

I tried installing the OpenVZ Kernel for Debian Lenny: fzakernel-2.6.24-amd64
(2.6.24+ovz004.1dso6)

After booting the server, it had no network connection because the bnx2 module wasn't loaded:
it's missing. The Version 2.6.18-12-fza-amd64 of the OpenVZ kernel works fine and has the bnx2
module with it.

I have the bnx2 firmware installed because this one was removed from the debian kernel, but the
driver for bnx2 was available.

Why is support for the bnx2 driver missing in the 2.6.24 kernel? Will it come in later releases?

Thanks in advance and best regards.

Tobi
