Subject: Re: VPS's takes upto 1 hour to start
Posted by whatever on Wed, 08 Oct 2008 18:04:54 GMT

When we reboot it takes upto 1 hour. All the VPS starts one by one and this process takes 1 hour.
Only 20VPS running and only 200gig of total disk used.
None of the VPS is having failcnt in beancounter.
I just want to know if we double the CPU and RAM will the time taken in the process of restarting VPS will reduce?

Thanks
