So when I turn my host's web server off, and then do a yum update within the VM I get this error:

```
yum update
Loading "fastestmirror" plugin
Loading "priorities" plugin
Determining fastest mirrors
Could not retrieve mirrorlist http://mirrorlist.centos.org/?release=5&arch=i386&repo=os error was
[Errno 4] IOError: <urlopen error (111, 'Connection refused')>
Error: Cannot find a valid baseurl for repo: base
```

Am I doing a NAT thing??? I have a public ip set for the VM.

Not sure why the networking is goofy.

Thanks,
tingerr
