Hi,

I hope somebody'll point you the exact version of kernel and zaptel module that work perfectly with each other but I want to make a little notes:

- I think you'd better try to do it by yourself and if something is wrong ask here
 - take care of building environment i.e. if you're going to build zaptel module against rhel based kernel do it in rhel/centos based VE. install gcc and kernel-devel package inside VE and compile the module inside VE.
-
