Let me correct Dim:
Sun Fire T2000 _can_ run OpenVZ. But we don't have such hardware and thus officially don't support it nor do builds.
OpenVZ patch itself is 99.99% platform independant, so there should be no much problems to make it work. If you have such a possibility we can help you with it.
Do you have this hardware? Are you ready to build/test kernels and make OS template?
