Quote:
why I would want to set up route through vlan interface now

because you should mark a packet as belonging to vlan interface.
If a packet pass eth0 interface how it could be marked?

Quote:
15:08:32.501126 IP 126.66.64.158 > 10.0.0.1: ICMP echo request, id 45655, seq 14, length 64

why do you expect 10.0.0.1 answer to the ip from different that 10.0.0.0/24 network?
