Hi Hemry thanks for your quickly response!!

I think the error is in this line of memory

```
resource held      maxheld barrier limit failcnt
numproc   50       65      65     65  93
```

Now im going to change that, and by the way, what do u thinks y a good memory cantidad for a VPS with 10 GB and 256 MB of memory ??

Thanks in advance again!
