the problem "ask your host for a list of IPs you can use" means that I need more public ip, can use my public ip from the both NIC.

yes more public IPs. 1x public IP for 1x CT

thibautm wrote on Tue, 21 October 2008 07:14Or, I need to add a private ip to each CT, but in this case I will have to redirect all trafic to CT via NAT, because otherwise how can reach my CT from external: apache

correct

I wanted something simple:
HN: use only the port ssh to manage CT
CT101: used as panel: using public ip from NIC, accessible from internet and can communicate with other CT
CT102 and other: have privates ip and are used for services

 http://wiki.openvz.org/VEs_and_HNs_in_different_subnets#An_O
penVZ_Hardware_Node_has_two_Ethernet_interfaces

and i imagine you will also need this when you add a new HN:
