I have had more than my fair share of quality help, so I am not complaining. I am truly impressed with OpenVZ.

I was fairly sure the environment would be similar; I had hoped to find a Wiki entry comparing the two, but either I missed it or it doesn't yet exist.

Does Virtuozzo also have a /etc/vz with a conf dir containing the conf files?

Whilst I am a Gentoo user, my prospective customer uses Fedora.

Thanks again,

Best regards, Paul.
