Hello,

could you please answer some question:

- are we talking about VE? Are previous outputs from inside the VE?
  - could you please show "ip a l" from inside the VE and also "ip rule list".
  - I don't quite understand the following thing: have you masked ip address "1.1.1.1" that are shown in tcpdump output. Should your VE forward that packets?
  - why do you need "-A POSTROUTING -s 10.24.127.8 -o eth0 -j RETURN " rule?
  - could you please show "ip r get "1.1.1.1"
  - could you please also run tcpdump on lo interface
-
