
Subject: [solved] Can't mount NFS partitions from the HN

I've followed this tutorial...
<http://wiki.openvz.org/NFS>

And now the NFS Server does work, I'm sharing one folder (webserver-home):

```
[root@webserver /]# rpcinfo -p 192.168.0.25
  program vers proto  port
 100000    2  tcp   111  portmapper
 100000    2  udp   111  portmapper
 100024    1  udp   626  status
 100024    1  tcp   629  status
```

But the fact is that on the VE I cannot mount it, and the nfs service refuses to start:

```
[root@webserver /]# mount -v -t nfs -o
rw,vers=3,rsize=32768,wsiz=32768,hard,proto=tcp,timeo=600,retrans=2,sec=sys,addr=192.168.
0.25 192.168.0.25:/mnt/webserver-home /home
mount: mount to NFS server '192.168.0.25' failed: RPC Error: Program not registered.
```

```
[root@webserver /]# service nfs restart
Shutting down NFS mountd:                [FAILED]
Shutting down NFS daemon:                [FAILED]
Shutting down NFS services:              [FAILED]
Starting NFS services:                    [ OK ]
Starting NFS quotas: Cannot register service: RPC: Unable to receive; errno = Connection
refused
rpc.rquotad: unable to register (RQUOTAPROG, RQUOTAVERS, udp).
[FAILED]
Starting NFS daemon:                      [FAILED]
```

```
[root@webserver /]# rpcinfo -p localhost
rpcinfo: can't contact portmapper: RPC: Remote system error - Connection refused
```

```
[root@webserver /]# modprobe nfs
FATAL: Could not load /lib/modules/2.6.18-92.1.13.el5.028stab059.3/modules.dep: No such file or
directory
```

This is the info of the HN:
[root@localhost ~]# vzctl --version
vzctl version 3.0.22

```
[root@localhost ~]# uname -a
```

Linux localhost.localdomain 2.6.18-92.1.13.el5.028stab059.3 #1 SMP Wed Oct 15 13:33:44 MSD 2008 x86_64 x86_64 x86_64 GNU/Linux

```
[root@localhost ~]# cat /etc/*release
CentOS release 5 (Final)
```

```
[root@localhost ~]# cat /etc/exports
/mnt/webserver-home 192.168.0.35(rw,no_subtree_check)
```

(HN is .25 and VE is .35)
