Hello,

let's take into consideration the only one VE.

It is not clear how could you get an access a particular VE but

Quote:

cannot connect to any IPs from the nodes

could you please clarify the situation?

ip a l (from the HN and from inside the VE)

ip rule list (from HN and from inside the VE)

ip route list (from HN and from inside the VE)

sysctl -a | grep forward (from the HN)

are you using any iptables rules inside the VE

could you please try to ping any ip address from inside the VE and at the same moment run
tcpdump utility inside VE (on a appropriate interface)and on the HN (on venet/veth and physical
interfaces).
