Thanks for the info Konstantin,

Interesting to know that the shmmax setting does not need to be adjusted in the host. Does that mean I just read the wiki page on the topic incorrectly? Or should it be updated

http://wiki.openvz.org/Postgresql_and_shared_memory

Also good to know about setting the memory options to max if you are only running one VE. I will do that and play around a bit with the shared_buffers in PG
