- 1. check firewall settings everywhere / flush them.
- 2. as you've bought HyperVM i think it might make sense to ask their support to help this is their job after all.

--

Konstantin

I haven't bought hypervm... i'm using the OS template from the download section here and am unable to connect to ssh on it.

Thanks.

p.s. flushed iptables on the test vps and still get connection refused.
