nobody an idea?

Another example:
/etc/exports

```
/vz 192.168.0.0/255.255.255.0(rw,no_root_squash,sync,no_subtree_check)
/usr 192.168.0.0/255.255.255.0(rw,no_root_squash,sync,no_subtree_check)
```

mounting:

```
fw-office:~# mount -t nfs 192.168.0.3:/usr/ /mnt/; umount /mnt/
fw-office:~# mount -t nfs 192.168.0.3:/vz/ /mnt/; umount /mnt/
mount: 192.168.0.3:/vz/ failed, reason given by server: Permission denied
umount: /mnt/: not mounted
```

log on nfs:

```
==> /var/log/daemon <==
Nov 24 08:43:18 cluster-office2 mountd[8515]: authenticated mount request from 192.168.0.1:990
for /usr (/usr)
Nov 24 08:43:19 cluster-office2 mountd[8515]: authenticated unmount request from
192.168.0.1:992 for /usr (/usr)
Nov 24 08:43:27 cluster-office2 mountd[8515]: authenticated mount request from 192.168.0.1:995
for /vz (/vz)
```
