Hello,
I'm experiencing some quota issues since my last kernel+vzquota upgrade.

- » The main node has enough space (60G+)
- » Container is using 1.1G
- » vzquota stat / df (inside container) shows the entire space is used

Any ideas how can I track what's causing it?

```
[root@ovz1 ~]# rpm -qa | grep vzquota
vzquota-3.0.12-1
```

```
[root@ovz1 ~]# uname -a
