Hi,
I wanted to migrate an openSUSE 11 from a physical server into a VE.
I did read some articles about "Physical to container" and "OpenSUSE template creation".
Then I copied everything from the physical server into /vz/private/XXXX, created a
/etc/vz/conf/XXXX.conf with parameter IP_ADDRESS in it (here XXXX is my VEID).
And I disabled the VE's udev, created several necessary devices in /dev using mknod, modified
/etc/fstab, linked /proc/mounts to /etc/mtab ... and so on.

By far, every is fine except network doesn't work. I can't ping from or into the VE.

When I do a "ifconfig" inside the VE, nothing retrieved.
While when I do a "ifconfig -a", the result shows as below.

```
-----  
# ifconfig -a  
lo      Link encap:Local Loopback  
        LOOPBACK MTU:16436 Metric:1  
        RX packets:0 errors:0 dropped:0 overruns:0 frame:0  
        TX packets:0 errors:0 dropped:0 overruns:0 carrier:0  
        collisions:0 txqueuelen:0  
        RX bytes:0 (0.0 b) TX bytes:0 (0.0 b)  
  
venet0  Link encap:UNSPEC HWaddr 00-00-00-00-00-00-00-00-00-00-00-00-00-00-00-00  
        BROADCAST POINTOPOINT NOARP MTU:1500 Metric:1  
        RX packets:0 errors:0 dropped:0 overruns:0 frame:0  
        TX packets:0 errors:0 dropped:0 overruns:0 carrier:0  
        collisions:0 txqueuelen:0  
        RX bytes:0 (0.0 b) TX bytes:0 (0.0 b)  
-----
```

So, can anyone help me or give a tip please?
Thank you.
