dev wrote on Fri, 26 May 2006 11:04you still didn't write kernel version. If it is 2.6.8 and you use statefull firewall (conntracks) in the host, then try FAQ #14:
http://openvz.org/documentation/faq/en#14

Oops! Here's the kernel:

vmlinux-2.6.8-022stab077.1

base OS is 2.6.9-11.EL #1

I disabled all firewall rules but still no luck.

The system is pingable - just no ssh working.
