Hi,

I have a container with Ubuntu 8.10 created from a template. It only have one repository, so I added some, because PHPMyAdmin was complaining about mcrypt, and php5-mcrypt was not found in the repository available.

I added the restricted and universe repository.

When I did an apt-get update && apt-get upgrade I got this:

```
-----
root@fry:/# apt-get upgrade
Reading package lists... Done
Building dependency tree
Reading state information... Done
The following packages will be upgraded:
  base-files libgnutls26 libxml2 login passwd procps
6 upgraded, 0 newly installed, 0 to remove and 0 not upgraded.
Need to get 2565kB of archives.
After this operation, 4096B disk space will be freed.
Do you want to continue [Y/n]? y
Get:1 http://security.ubuntu.com intrepid-security/main login 1:4.1.1-1ubuntu1.1 [300kB]
Get:2 http://security.ubuntu.com intrepid-security/main base-files 4.0.4ubuntu2.2 [65.1kB]
Get:3 http://security.ubuntu.com intrepid-security/main passwd 1:4.1.1-1ubuntu1.1 [787kB]
Get:4 http://security.ubuntu.com intrepid-security/main libgnutls26 2.4.1-1ubuntu0.2 [368kB]
Get:5 http://security.ubuntu.com intrepid-security/main procps 1:3.2.7-9ubuntu2.1 [226kB]
Get:6 http://security.ubuntu.com intrepid-security/main libxml2 2.6.32.dfsg-4ubuntu1.1 [819kB]

Processing triggers for libc6 ...
ldconfig deferred processing now taking place

What is good and what is bad?
What is related to the fact that it runs inside a container?
Am I not "supposed" to do this? I think if theres been done some customization to the template,
that the upgrade-process remove?
