---

Ubuntu 8.04

```
vzctl exec VEID /sbin/MAKEDEV pty
```

```
vzctl exec VEID /sbin/MAKEDEV tty
```

these commands make links to devices on / directory instead of /dev/

may be

```
vzctl exec VEID /sbin/MAKEDEV /dev/pty
```

```
vzctl exec VEID /sbin/MAKEDEV /dev/tty
```

?

On our installation we successfully fixed this error simply by executing

```
apt-get remove --purge udev
```

without creating any device by MAKEDEV.

What is the purpose of this package inside VE?
