Subject: One container on it's own Hard drive/partition/spindle
Posted by elliot on Tue, 16 Dec 2008 21:37:42 GMT

I have a machine with multiple hard drives and I'd like to put each container on it's own drive.
Where should I mount it?
It looks like /vz/private/201 and /vz/root/201 are hard links, but how does that work with multiple hard drives?
Thanks,
-Elliot
