Hello Folks,

I installed OpenVZ and vzctl via yum using the openvz repository. While it appears that openvz installed and is running as normal, I receive the error 'bash: vzctl: command not found' when trying to access vzctl. I also have the same problem with vzquota. I've done this install before on another CentOS 5.2 server, so I'm a bit stumped.

Could someone shed some light on what directory the vzctl app installs into, or what I'm doing wrong here? Thanks in advance.

Josh

OS: CentOS 5.2

Kernel: 2.6.18-92.1.13.el5.028stab059.6

```
# yum list installed | grep vz
```

```
ovzkernel.i686          2.6.18-92.1.13.el5.028 installed
vzctl.i386              3.0.23-1          installed
vzctl-lib.i386         3.0.23-1          installed
vzquota.i386           3.0.12-1          installed
```
